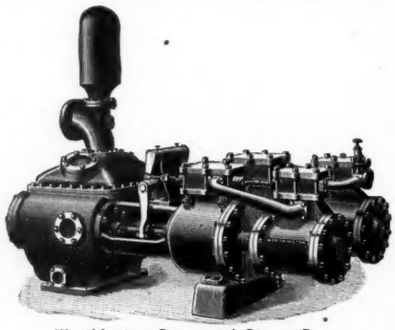
Steam Pumping Machinery

— AND —

WATER METERS.

The attention of users of steam pumps is called to the recent improvements made in these machines. In addition to many new features in design and construction, the pumps are made much heavier and stronger, in order to meet the requirements of severe service and the increased steam pressure now so generally used. An illustrated catalogue will be furnished on application. Prices recently revised.



Worthington Compound Steam Pump.

This pattern of Worthington Pump is recommended in any service where the saving of fuel and operating expenses is an important consideration. In such cases their greater first cost is fully justified, as they require 30 to 33 per cent less coal than any high-pressure form on the same work.
